Defenders of the Electoral College’s rules claim swing states* change, eventually giving each state its moment in the political spotlight.

But the people of Rhode Island know better. Their state hasn’t been a swing state since 1956.

* A "swing state" is defined as a state with a partisanship rating between 47% and 53%, meaning that if a presidential election were highly competitive nationally, the outcome in the state might determine who wins the White House.
