

COMPETITIVE ELECTIONS & FAIR REPRESENTATION

Fair Voting Plan for California State Assembly

Fair Voting Means More Accurate Political Representation

| | Statewide Partisanship* | California's Plan: Projected Seats | Fair Voting Plan: Projected Seats |
|-------------|----------------------------|---------------------------------------|--------------------------------------|
| Democrats | 58.3% | 60% (37 Safe + 11 Lean) | 55% (38 Safe + 6 Lean) |
| Republicans | 41.7% | 24% (13 Safe + 6 Lean) | 35% (27 Safe + 1 Lean) |
| No Lean | - | 16% (13) | 10% (8) |

^{*} The partisan percentages and projections are based on an interpretation of the 2008 presidential election. Calculations do not account for incumbency advantage.

Problems with Winner-Take-All System

- Lack of representation: Since a candidate can win with just 50% + 1 of the vote, the other half of a district can be poorly represented.
- Uncompetitive elections: In districts with a strong incumbent or a clear majority in favor of one party, there is little chance for other candidates to compete seriously for the seat.
- Unrepresented communities: With only one seat up for grabs, racial minorities and women can be left unrepresented. Fewer women run.
- Low voter participation: Less reason to vote when so many elections are uncontested.

How Does Fair Voting Work?

Fair voting is an American form of proportional representation, which upholds electoral traditions while delivering meaningful elections and providing voters with more accurate representation.

Instead of 80 individual State Assembly districts, our fair voting plan combines these one-seat districts into larger "super-districts" with five representatives apiece. Under this plan, any candidate receiving strong support from at least 17% of voters is sure to win a seat.

Fair Voting Results in Fair, Meaningful Elections

| | | California's Plan | Fair Voting Plan |
|---|--------------------------|-------------------|------------------|
| ŀ | District Competitiveness | 16% (16/80) | 100% (16/16) |
| | Shared Representation | 0% (0/80) | 94% (15/16) |

Fair Voting Expands Voting Power of Racial Minorities*

| | Statewide CVAP [†] | California's Plan: Voting Power | Fair Voting Plan: Voting Power |
|--------|--------------------------------|------------------------------------|-----------------------------------|
| White | 57.9% | 65% (48 + 4 opportunities) | 59% (44 + 3 opportunities) |
| Black | 6.4% | o% (o) | 3% (2) |
| Latino | 21.6% | 18% (14) | 20% (13 + 3 opportunities) |
| Asian | 12.1% | 1% (1) | 5% (4) |
| ??? | - | 16% (13) | 14% (11) |

^{*} Voters might not necessarily vote for a candidate of their same race. Rather, voting power measures the ability of voters from different racial groups to elect strongly preferred candidates.

Benefits of a Fair Voting Plan

- Shared representation of different views: Supporters
 of both major parties elect candidates everywhere, with
 accurate balance of left, right, and center.
- More voter choice: Better chance for third parties and independents, as there is a lower threshold for candidates to win a seat.
- **More competition:** With voters having a range of choices, candidates must compete to win voter support.
- Better representation of racial minority communities: Lower threshold for racial minority candidates to earn seats, even when not geographically concentrated.
- More women: More women likely to run and win.
