Methodology & Notes

Overview

In this ninth edition of our long-running series on the state of representative democracy in U.S. House elections, *Dubious Democracy 2010* provides a comprehensive assessment of the level of competition and the accuracy of representation in House elections in all 50 states from 1982 to 2010.

Features include:

- State-by-state profiles of all 50 states with data from 1982 to 2010.
- Rankings of all 50 states on a “democracy index” based on average margin of victory, percentage of seats to votes, how many voters elect candidates and number of House races won by overwhelming landslides.
- Summaries of national trends in various measures of competitiveness and representation.

Some highlighted national facts concerning the 2010 elections include:

- *Unusually high seat changes amidst generally lopsided races:* The 54 incumbents who lost to challengers were about ten times the average number of general election defeats for incumbents in the four elections from 1998 to 2004. Yet, two-thirds of incumbents were re-elected by “landslide” margins of at least 20 percentage points.
- *Landslide wins continue:* In seven states, every race was won by a landslide margin of at least 20 percentage points. Only six states (all with fewer than four seats) did not have at least one landslide winner.
- *High victory margins:* The average victory margin was a whopping 33 percentage points. Six of every ten (64.4%) U.S. House races were won by landslide margins of at least 20 percentage points. Only 81 races (18.6%) were won by competitive margins of less than 10 percentage points.
- *Apathy and representation:* Barely one in three eligible voters did not vote for a winning U.S. House representative.

The report includes revealing statistics from states in the “facts in focus” section. Here are just a few “lowlights” from the states:

- **Iowa** is the biggest state to have never elected a woman or person of color to the US House. **Mississippi** has never elected a woman to the House.
- **Nebraska** Democrats regularly win a third of the U.S. House vote, but have not won a seat since 1992. **Massachusetts** Republicans have not won one of the state’s 10 U.S. House seats since 1994, even though in 2010 Republican candidates won more than a third of the statewide vote.
- An average of just 25% of eligible voters in **Texas** cast a ballot for a winning House candidate in elections from 1992-2010. Only 21% of eligible voters in **Louisiana** cast a ballot for a winning candidate in this period.
- U.S. House incumbents in **West Virginia** have won 44 straight general election races, dating back 28 years.

As suggested by such statistics, *Dubious Democracy* tells a powerful overriding story: although our constitutional framers gave the House of Representatives extraordinary powers, and, of all the branches of government, the clearest accountability to the American people, that accountability has been

Overview

destroyed beyond all recognition. This breakdown of democratic accountability can be measured in different ways. Here are two:

Accountability of leadership: since 1952, the White House has changed partisan control seven times in 14 elections, while voters have changed control of the U.S. House just three times in 29 elections. This means that voters are almost five times more likely to change the party running the White House than “the people’s house.” Before 2006, partisan control had shifted exactly once in a half century, in contrast to six partisan changes in control of the White House.

Voter choice: In each of the four national elections between 1998 and 2004, more than 98% of incumbents won, and more than 90% of all races were won by non-competitive margins of more than 10 percentage points. From 2006-2010, the elections’ competitiveness was slightly improved, but still well over 90% of incumbents won, and seven in eight races were won by non-competitive margins of more than 10 percentage points.

As we look at how strikingly non-competitive House elections have become in recent decades, we must confront the fact that, by far, the most important factor is that the U.S. House is elected by winner-take-all, single-member districts. Winner-take-all elections held with plurality voting rules tend to limit general elections to candidates from two parties. Given that the great majority of geographically-defined areas in the nation show clear preference for one party over the other, most incumbents have virtually a free ride in general elections because their party is preferred in their district. The problem of lack of competition, even in those relatively few districts that are more balanced, has become more pronounced, for several reasons:

- Incumbents and parties are more sophisticated about what incumbent officeholders should do in serving their district to shield themselves from competition.
- New computerized methods of redistricting, combined with the need to draw new districts every ten years and the lack of nonpartisan standards governing the process, increase more districts with a tilt toward one party and/or particular incumbents.
- Those partisan tilts are more decisive than ever because the national parties have become quite distinct in most voters’ minds, leading to less ticket-splitting.

The end result is that most voters don’t have a real choice between two candidates, let alone three or more candidates- undermining a healthy two-party system, where issues ignored by one major party can be meaningfully addressed by the other. If voters would like to hear about the policy ideas of independent and third party candidates, they’re even more shut out. It’s time to stop blaming the victims of the American electoral system – the voters – and start addressing the root causes of alienation and lack of representation: our winner-take-all electoral system, buttressed by incumbent privileges, campaign cash and partisan redistricting run amok.

FairVote advocates for changes that promote voter choice and fair representation, such as, proportional voting methods, ranked choice voting and independent redistricting methods. These reforms can greatly improve representation and accountability, increase competition, enhance debate of issues and ultimately improve public policy and national unity. *Dubious Democracy 2010* makes it clear that serious consideration of these changes is long overdue.

Glossary

Average Margin of Victory (MOV):	Measure of the average in a state's House race of the winner's percentage of the vote minus the second-place candidate's percentage of the vote.
Comfortable (Scale of Competitiveness):	Won by at least 10% and less than 20%.
Competitive (Scale of Competitiveness):	Won by at least 5% and less than 10%.
Democracy Index:	Measure of a state's average ranking in key categories: average margin of victory (measuring overall competitiveness), landslide index (measuring the number of somewhat competitive races), seats-to-votes distortion (measuring how well the intent of voters was reflected by the results), and representation index (weighted double, as it measures both voter participation and the percentage of effective votes that elect someone).
Drop-Off Voters:	Percentage of voters who participated in a statewide race but did not vote in a U.S. House election.
Elected Racial Minorities:	Measure of the number of U.S. House representatives from a state who are Black (B), Latino (L), Asian (A), and American Indian (AI).
Elected Women:	Measure of the number of women in a state's US House delegation.
High/Low % Voter Turnout:	The congressional districts with the highest voter turnout in a state and the lowest voter turnout in a state.
Incumbent Win Streaks:	Records the length of time since an incumbent has been defeated. It ranks each individual state according to the duration of time in which there has been a 100% incumbent re-election rate (all incumbents seeking re-election in general elections were successful).
Landslide (Scale of Competitiveness):	Won by at least 20% and less than 40%.

Landslide Index:	Measure of the percentage of all U.S. races won by a margin of victory of at least 20 percent.
No Contest (Scale of Competitiveness):	Won by 40% or more.
Representation Index:	Measure of the percentage of eligible voters in a state who voted for the winning candidate in US House elections. The index is determined by multiplying the voter turnout in US House races by the percentage of votes cast for winning candidates.
Seat Changes:	Number of districts that changed parties where an incumbent was defeated.
Seats-to-Votes Distortion:	Measure of the average by which one party wins a greater percentage of seats than votes and the other party wins a smaller percentage of seats than votes. The distortion is calculated by adding the percentage distortion for each party and then dividing by two. For example, if Democratic candidates won 10% more House seats than votes and Republicans won 6% fewer House seats than their share of the House votes, the seat-to-vote distortion would be 8%.
Tight:	Won by less than 5%.
Uncontested:	Won without major party opposition (but possibly opposition from minor party or independent).
Untouchable:	U.S. House incumbents who won by landslides in the last two general elections.
Vote power:	Measures, by party, how powerful a vote was in electing the state's U.S. House representatives. It divides the percentage of seats won by a party in a state, with the percentage of votes won by the party in the state.
Voter Turnout:	Measure of the percentage of the voting eligible population who voted in a state's US House elections (as opposed to statewide and presidential elections). We use population estimates by Professor Michael McDonald at George Mason University. His figures estimate the number of voting age adults who are eligible to vote, which means they exclude non-citizens and other adults who cannot vote, and estimate eligible overseas voters from that state.

Votes and Seats for:	Percentage of votes and seats won by Republicans, Democrats, and others; "O" refers to independent and third party candidates.
Wasted Vote Index:	Total number of votes cast for losing candidates.
Wasted Votes, R / D:	Percentages of votes for Republicans and Democrats that did not help to elect a candidate.

Democracy Index

Measure of a state's average ranking in key categories: average margin of victory (measuring overall competitiveness), landslide index (measuring the number of somewhat competitive races), seats-to-votes distortion (measuring how well the intent of voters was reflected by the results), and representation index (weighted double, as it measures both voter participation and the percentage of effective votes that elect someone).

Incumbent Win Streaks

The length of time since an incumbent has been defeated. It ranks each individual state according to the duration of time in which there has been a 100% incumbent re-election rate (all incumbents seeking re-election in general elections were successful). *States in which an incumbent was recently defeated receive higher rankings in this index.*

General Notes

General Results: All election results provided in the 2010 edition of Dubious Democracy are those that have been verified and certified by Secretaries of State and Election Commissions in every state.

High/Low % Voter Turnout: Since 2002, the methodology for calculating voter turnout has changed. In the past, FairVote calculated voter turnout by using the percentage found from dividing the total votes cast by the total voting age population (VAP) in each Congressional district. We then contrasted the district with the highest voter turnout and the district with the lowest voter turnout. However, beginning with the 2002 release of Dubious Democracy, FairVote started measuring voter turnout using the statewide total voting eligible population (VEP), which is calculated by dividing the total votes cast by the total voting eligible population for a given state. The VEP is obtained by subtracting from the VAP all non-citizens, prisoners, ex-felons, overseas voters, and/or any other classes of people that may be restricted or prohibited from voting under a particular state's statutes and regulations. Since the VEP looks at the state aggregate and not individual districts, our data sets no longer distinguish between districts with the highest and lowest voter turnout. The VEP statistics were developed by Prof. Michael McDonald of George Mason University. For more information about VEP and voter turnout, please see [his work](#).

Uncontested Elections: Candidates in uncontested US House races in Florida (district 21) and Oklahoma (district 4) were not listed on the ballot, so voters were not able to cast votes for them. A vote total of 1 was used to signify the incumbent for such uncontested races.

State-specific Notes

Connecticut: Connecticut allows fusion voting, meaning that candidates can represent more than one party (for instance, John B. Larson, running in District 1 represented both the Democratic Party and the Working Families Party). In this report, all votes for a candidate representing a major party (including those cast in the name of a third party) are counted towards that major party's vote total.

New York: New York allows fusion voting, meaning that candidates can represent more than one party (for instance, John B. Gomez, running in District 2 represented both the Republican Party and the Conservative Party). In this report, all votes for a candidate representing a major party (including those cast in the name of a third party) are counted towards that major party's vote total.

Washington: Washington has a primary system in which the top two vote-getters, regardless of party, advance to the General Election. This can lead to situations in which two candidates from the same party are running against each other in the general election (though this did not happen in any Congressional races in 2010).
